

Youtube link which one I use	
1	Project 1: Follow Below Youtube Link No:1 https://www.youtube.com/watch?v=7BkGGc8u2Yk
2	Sudo Command In Linux 2 Terminal So I follow step Link No :2 https://www.youtube.com/watch?v=p8H9UoUjP1g
Steps	
Sl	Description
1	First Create RDS Database Cluster See Video : Crt_RDS_Database_Cluster
2	Second Launch Instances See Video : Launch_Instances
3	Connect Instances To Prompt Linux 2 Terminal
4	Linux Command : Sudo Su Login Root User
5	Linux Command : yum install -y mysql for install mysql
6	I Copy RDS Cluster End Point And Export As MySQL Host Command Is : export MYSQL_HOST=yt-dbinstone.c9ceksaacmug.ap-south-1.rds.amazonaws.com
7	I want to Connect RDS Database Cluster To MySQL The Command Is : mysql -h yt-dbinstone.c9ceksaacmug.ap-south-1.rds.amazonaws.com -P 3306 -u admin -p
8	After 7 Step That Prompt Ask RDS DB Cluster Password I Enter Password : htn1985aA
9	After Successfull Connect RDS Cluster to MySQL I Create Database Called wpdb The Command Is : CREATE DATABASE wpdb;
10	I Create User For MySQL Database wpdb The Command Is : CREATE USER 'wpdbuser' IDENTIFIED BY 'H1348512Aa';
11	Provide All Permission To User wpdbuser particular Database Name : wpdb the command is : GRANT ALL PRIVILEGES ON wpdb.* TO wpdbuser;
12	FLUSH PRIVILEGES Is mandatory after modify permissions the command is : FLUSH PRIVILEGES;
13	Now Exit From MYSQL The Command Is Exit
14	Now I install apache the command is : yum install httpd -y
15	After Complete Installation Start apache services the command is : service httpd start
16	after httpd service start make logon service the command is : chkconfig httpd on
17	download wordpress template the command is : wget https://wordpress.org/latest.tar.gz this zip file
18	After completec download run ls command to view dir/file list show download file called latest.tar.gz
19	Now unzip latest.tar.gz file the command is : tar -xzf latest.tar.gz and run ls command to show unzip folder called wordpress
20	now enter in to wordpress folder the command is : cd wordpress and Run ls Command to show file/folder list under wordpress folder
21	Now Copy wp-config-sample.php as wp-config.php the command is : cp wp-config-sample.php wp-config.php
22	Now I Edit wp-config.php file the command is : vim wp-config.php
23	i adjust require SQL database information like database name,user name, password,db host (rds end point name) ,authentication token
24	I copy authentication token from https://api.wordpress.org/secret-key/1.1/salt/ and paste in to wp-config.php file
25	save and close wp-config.php file the command is : wq!
26	now I installed php the command is : sudo amazon-linux-extras install -y lamp-mariadb10.2-php7.2 php7.2
27	after complete php installation I exit from wordpress directory command is : cd ..
28	now I copy inside wordpress directory contents to website delivery root path var/www/html/ the command is : cp wordpress/* /var/www/html/
29	after copy wordpress directory contents delete wordpress folder the command is rm -r wordpress rm -l
30	now I restart httpd service the command is restart httpd.service
31	now I refresh webpage it show the wordpress website welcome page
32	http://13.233.136.189/wp-login.php?loggedout=true&wp_lang=en_US
